*For Immediate Release*

### **Meister Abrasives Exhibits Innovative Grinding Wheel Technology at IMTS 2018**

---

*North Kingstown, RI, June 1, 2018:* At IMTS 2018, Meister Abrasives, a six decade pioneer in the development of advanced vitrified CBN and Diamond superabrasive grinding wheels, will be displaying innovative products that can be custom-tailored to provide users with superior manufacturing quality, precision and productivity. Exhibiting alongside Meister Abrasives will be sister company Alfons Schmeier GmbH & Co. Both companies are divisions of Abraxos Holding AG, Switzerland.

High-Points of the exhibit include:

- New HPL anti-friction abrasive products formulated to eliminate part burning while maintaining superior grinding productivity.
- New Hybrid-Bonded long-lasting precision dressing tools that can dramatically reduce process variability while improving quality and productivity of grinding processes.
- New double-disk fine-grinding wheel solutions customized for grinding ultra-flat and parallel surfaces.
- Big Wheels – Swiss quality large vit CBN and Diamond abrasive wheels, up to Ø1225 mm (approximately 4 ft.) in diameter, manufactured in and delivered from the USA.
- Custom tailored grinding and dressing solutions targeted to resolve critical issues facing a broad range of industries, including automotive, fuel injection, aerospace, bearing, medical, energy, and semi-conductor manufacturing.

Meister Abrasives Applications engineers will be on hand in the booth to discuss how you can improve the performance of your grinding processes. Visit Meister Abrasives and Alfons Schmeier at IMTS Booth 237341, North Hall.

**Meister Abrasives** is a customer-focused, technology-driven company dedicated to the development, application, and optimization of manufacturing processes using high-performance abrasive tools.

## PHOTO ATTACHMENTS

**New Dresser Technology:** “Meister’s new hybrid-bonded long-lasting precision dressing tools dramatically reduce process variability while improving quality and productivity of grinding processes.”

**Your Call...Large or Small:** “Meister precision is meeting the challenges of the fuel injection and bearing industries where internal dimensions are ever diminishing and materials are becoming more exotic. And on the large side, Swiss quality external vit CBN and diamond wheels up to Ø1225 mm (approximately 4 ft.) are now manufactured in and delivered from the USA.”

**Innovative Solutions to Complex Challenges:** “In this gear box cutaway two wheels mounted on one arbor are simultaneously grinding multiple bores and faces. “
